TRANSPARENT BIPHASE COMPOSITION FOR TOPICAL APPLICATION

The invention relates to a composition, which can be used for cosmetic purposes such as hair and skin care, the composition having a distinct aqueous phase and a distinct oily phase, the aqueous phase comprising at least 40% by weight with respect to the total weight of the aqueous phase of one or more polyols, and the oily phase comprising at least 5% by weight with respect to the total weight of the oily phase of one or more silicone oils, wherein the quantity of polyols and the quantity of silicone oils being such that the refractive indices of the two phases are substantially identical.
